Commercial Price List to Fruit Growers

PEACHES

AS ONE OF AMERICA'S LEADING FRUITS, PEACHES CONTINUE TO BE A GREAT PROFIT-MAKER AND GENERAL FAVORITE OF GROWERS IN COMMERCIAL AND HOME PLANTINGS.

PROPER VARIETY AND TREE SELECTION WILL LEAD TO QUICKER RESULTS AND GREATER PROFITS AND SATISFACTION—LET US HELP YOU WITH YOUR PLANTING NEEDS THIS YEAR.

Come in or write and take advantage of this direct-to-the-planter service.

HILAND. A highly light colored, yellow clingstone peach formerly tested as FV 123-41 and is the result of cross between Southland and seedling of Hiley by Halehaven. Ripens just before Cardinal or 5 days before Dixired. Blossoms large, opening just after Hiley. Buds require about 750 hours to break rest period. Tested mostly in Southern States. Vigorous and productive. Fruits medium size, ovate, light pubescence, attractively colored, with light red blush at shipping stage. Flesh yellow, fairly firm, medium textured, and of good flavor. Recommended where low chilling requirements are a factor. A U.S.D.A. introduction.

MAYGOLD. This peach ripens about 3 days earlier than Dixired. The fruit is clingstone, medium sized, ovate, with very light pubescence. It is attractively colored, with a light red blush covering about half the surface, over an attractive yellow ground color. The flesh is yellow, firm but melting, medium-textured, and of good flavor. Due to its short chilling requirements it is successful in Florida, South Georgia and South Carolina.

RED CAP. A Southland-Dixired cross formerly tested as FV 121-58. Ripens just before Dixired and resembles Dixired very much. A clingstone, medium size, round with light pubescence, attractive red blush covers most of the peach. The flesh is yellow, firm but melting, medium-textured and good flavor. Trees are moderately vigorous and productive. Blossoms are small petaled and self-fertile, opening with Southland. Buds only require 750 hours chilling to break rest period like Hiley, Southland and Hiland. Tested mostly in Georgia, this variety shows real merit and should prove especially valuable where short rest periods are a factor. We have observed this variety for several years and can recommend it highly. A U.S.D.A. introduction.

CARDINAL. Introduced and released by U.S.D.A. during summer 1951. Cardinal is a seedling of Halehaven selfed and formerly tested as FV 101. Ripens four days ahead of Dixired, more than two weeks before Jubilee. Fruits are clingstone, medium size, round, light pubescence. Well covered with attractive red blush over good yellow ground color. Flesh is yellow, firm, medium-textured and good flavor. About size of Dixired also in color, appearance and firmness. Blossoms medium sized, self-fertile and open about with Elberta. Chilling requirements about 900 hours. Should succeed anywhere Dixired can be grown and has advantage of being earlier. We recommend this peach from what we have seen of it in past several years and where low chilling requirements are not a great factor, as its quality and appearance will make it popular in many sections.

DIXIRED. A product of the U.S.D.A., is a clingstone, medium size, round with light pubescence. About three-fourths of the surface is covered with a bright attractive red blush. Flesh is yellow, firm but melting, medium textured and of good flavor. The outstanding characteristics of Dixired are its unusual firmness and slow rate of softening for an early peach, plus an attractive appearance. The fruit acquires color long before it is ready to pick. Dixired is recommended for trial as an early shipping peach.

JERSEYLAND. Introduced by the N. J. Peach Council as an early, large, firm, attractive, yellow-fleshed freestone, ripening a few days before Golden Jubilee. It hangs well to the tree and is an excellent shipper. Tree is hardy, sets fruit buds freely and comes into bearing early. Recommended for trial in sections where early peaches are profitable. This variety has been marketed as Beauty Gem by many growers in the South-East.

SPECIAL 5% DISCOUNT

ON ALL ORDERS RECEIVED ON OR BEFORE JUNE 10TH. THIS WILL HELP US TO WORK OUR SCHEDULE OF VARIETIES.

FALL-SPRING

[1963]
SEASON

RED SKIN. Introduced by The University of Maryland. A fine texture, firm flesh, yellow freestone, that tends to redden at the pit more than Elberta, but ripens with Elberta; very firm, slow to soften and more than three fourths of the surface covered with bright red. A favorite of Commercial Fruit Growers.

Dear Friend and Customer:

This is a copy of our new catalog. We hope you will reserve it for future use.

Remember, we are as close to you as your telephone. You may call us collect to place your order for Nursery Stock.

We give 5% discount on all orders placed before June 10th.

At this point we want to take the opportunity to thank our many satisfied customers who buy from us each season. We appreciate the confidence you have in us in that you are willing to recommend us to your friends. We shall endeavor to never betray this confidence.

Sincerely yours,
PACKS TRUE TO NAME NURSERY
O. D. Pack, Manager

SUNHAVEN. Result of cross made in South Haven, Michigan by Stanley Johnston in 1944. Matures ten days earlier than Red Haven. Fruit is large in size, nearly round and uniform in shape. Color much like Red Haven, largely bright red with stone ground color for attractive contrast. Fruits keep and handle unusually well for such an early maturing variety. Flesh clear yellow, fine textured, firm, of good flavor and resistant to browning. A partial cling until fully ripe. Trees are large, vigorous, and productive. Recommended for an early fresh fruit market variety.

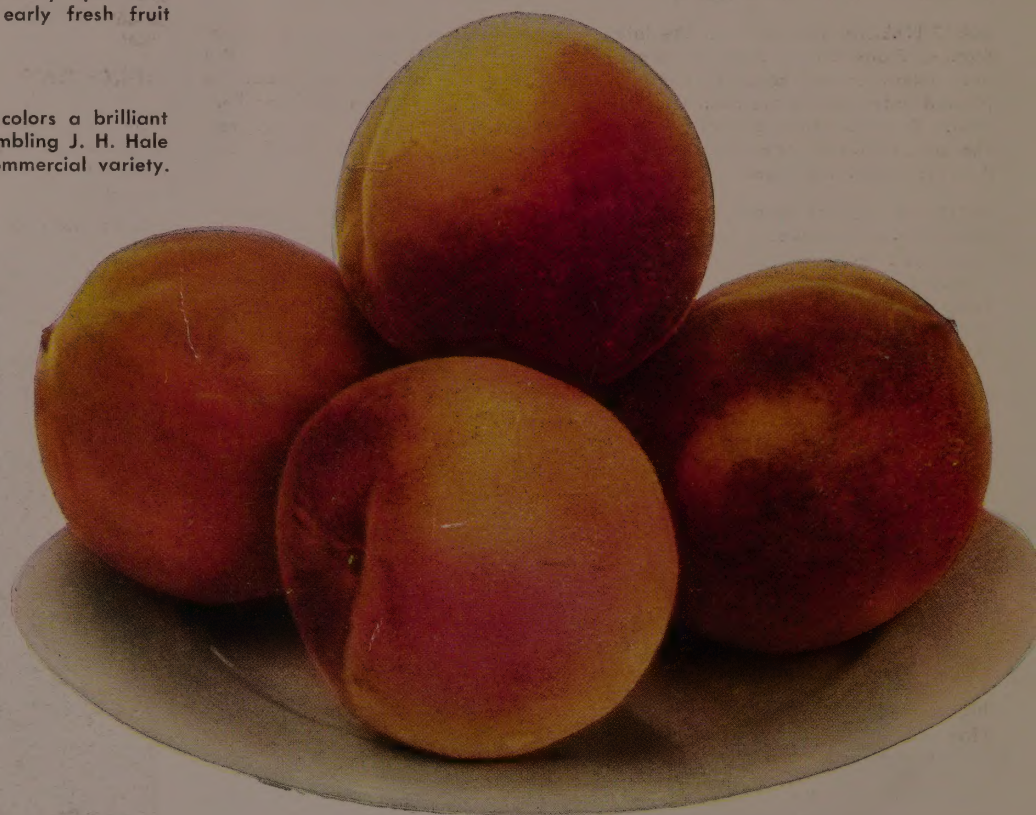

REDHAVEN. Is a cross between Halehaven and Kalhaven. It colors a brilliant red and beautiful yellow. Skin a smooth, almost fuzzless, resembling J. H. Hale in color, skin and flesh. Flesh is very firm. An old favorite commercial variety.

CORONET. Formerly tested as FV 126-79. Coronet resulted from a cross between a seedling of Hale Haven selfed and Dixigem. Tested and released by U.S.D.A. June 1953. Coronet ripens 2 to 3 days earlier than Dixigem or just before Red Haven. The fruit is medium size, highly colored, yellow fleshed tending to stick to pit when not fully ripe but a freestone when ripe. Bright, attractive red blush over good yellow ground color. Firm, smooth textured, very good but mild flavor. Coronet trees are vigorous and productive. Blossoms are small-petaled, self-fertile, chilling requirements about 800 hours or a little less than Elberta. This is a fine looking peach and a challenge to Redhaven in many areas, especially in southern peach sections and may replace Dixigem.

DIXIGEM. Ripens several days ahead of the Golden Jubilee and Redhaven. The fruit is medium size, ovate with light pubescence and a bright, attractive red blush covering about half the surface. The ground color is a bright yellow. The flesh is yellow, medium to firm, having a fine texture and excellent flavor. It is almost a freestone when fully ripe and is usually semi-free at shipping stage.

RANGER. A fine looking yellow freestone Peach ripening with or just after Golden Jubilee, formerly tested as B12160 and a seedling of Rariton Rose selfed. Medium to large size, almost round, with light pubescence, highly colored with bright red blush covering most of peach. Flesh yellow, medium firm, medium textured, good flavor and suitable for canning or freezing. Tree is vigorous and productive showing marked resistance to bacterial leaf spot. Blossoms medium sized, self fertile, usually open after Elberta. Ranger has been tested in Md., S. C., Ga., Tex., W. Va., and Dela. and should prove valuable in the central peach areas for local or commercial markets. This is a U.S.D.A. introduction.

KEYSTONE. Tested as FV 177-17, a cross of Newday X Southland, released July 1954 by U.S.D.A. Keystone ripens just ahead of Triagem and after Jubilee. The fruits are large, highly colored, round light pubescence, bright golden ground color. Flesh is yellow, firm, smooth texture and of good flavor, and a freestone. Trees are vigorous and productive where tested, with less bacterial spot than Southland or Elberta. Blossoms are small petaled, self fertile, opening about with Southland, requires 750 chilling hours to break rest period. Keystone would seem to be especially well adapted to the Southern Peach areas.

SUNHAVEN PEACH

P A C K - T R U E - T O - N A M E N U R S E R Y

TRIOGEM. An early, oval red all over, firm, yellow freestone peach ripening usually about two days after Golden Jubilee or 20 to 25 days before Elberta. The trees are medium in size, hardy and heavy bearers. Trees require good soil and good culture for best results. For the past several years Triogem has fruited over a wide area and has gained in popularity due to heavy yields and good marketing traits. Hardness of tree has been another factor for its increased popularity. It is well to remember however the tree needs heavy feeding and a good spray program for best results.

SUNHIGH. A large, red, bright smooth peach, which colors well all over before it ripens, softens slowly, making it a good commercial peach. Flesh inclines to adhere to the pit when hard ripe, but is generally freestone. The tree is spreading in growth and the dormant buds are hardy. The variety seems to be best in hilly sections and requires thorough summer spraying.

SOUTHLAND. A promising new fleshed variety that looks very good to precede Halehaven. Don't miss out on this one. The Southland has lived up to all predictions made for it. New yellow fleshed variety ripening in Hiley season. Released by the U.S.D.A. July 1946, and tested under No. FV-4-155. Southland is a seedling of Halehaven selfed. It ripens about with Hiley or 16 days before Elberta. The fruit is a freestone, medium to large size, round and has little fuzz. The color is attractive with a light red blush covering about half the peach at shipping ripe stage. The flesh is yellow, firm, slow softening, medium textured good flavor. The trees are vigorous and productive, blossoms large and self fertile.

RED GLOBE. Yellow flesh, freestone, fine firm texture resistant to brown rot. Large size; bright red color over golden ground color covering the full surface of the peach. Unexcelled shipping quality. Good for freezing and canning. *from marland*

RICH HAVEN. A U.S.D.A. release. Originated at South Haven, Michigan Experiment Station. Richhaven gives promise of replacing the Hale Haven variety. Fruits large, uniform in size and shape. Color a bright red blush with stripes of red and gold laid over a bright golden color. Fuzz is unnoticeable, and an unusually thick tough skin adds to its handling and shipping ability. Flesh is a clear yellow with moderate reddening about the pit. Entirely a freestone when ripe. Ripens with Hale Haven or 14 days before Elberta.

HALE HAVEN. Good size and color, yellow flesh freestone. Favorite commercial variety.

LORING. Originated by the Missouri State Experiment Station at Mountain Grove, Mo. Resembles Golden Jubilee in color and shape, however, is much firmer and does not soften at the suture or tip. A large firm yellow fleshed freestone with attractive bright color of red and yellow over a yellow ground color. Ripens about 1½ weeks ahead of Elberta.

GOLDEN EAST. By popular demand we add the Golden East to our peach list. A large oval highly colored, yellow fleshed peach ripening with Hiley or about 7 days before Elberta. Freestone, a promising variety for practically all peach growing areas. The tree is upright, spreading and vigorous. The dormant buds are medium in hardness. Worthy of trial in all sections.

BLAKE ELBERTA. Named from the late Dr. M. A. Blake of the N. J. Experiment Station. Fruits are medium to large, very highly colored with attractive red over yellow ground color. It is a freestone having considerable red about the pit and extending to the flesh in some cases. Flesh is very firm and of excellent flavor. Trees are good growers, ranks with Elberta in hardness of bud and tree. The size, its bright attractive red coloring and season of ripening should make the Blake a desirable peach to precede Elberta.

SULLIVAN'S EARLY ELBERTA. It is proving to be well adopted to the entire Central peach growing areas as well as Southern peach states. The variety found as a bud sport in the orchard of Mr. J. P. Sullivan at Zebulon, Ga. The tree and fruit characteristics were found to be identical with Elberta. Sullivan's Early Elberta is being planted extensively throughout Georgia and adjoining states. Our trees are propagated from the original strain. it ripens ahead of the regular Early Elberta and Belle of Georgia.

BELLE OF GEORGIA. The white peach that has stood the test of time and stands today as the leader of all white peaches of its season, adapted to large commercial plantings in all peach producing areas. Fruit large, bright attractive red almost covering the peach with white background. Flesh white, highly flavored and very firm and known universally as one of the best shipping white peaches in cultivation. Tree very vigorous, hardy and productive. Are you planting to supply the demand for a good white peach? Plant Belle of Georgia. A freestone.

REGULAR ELBERTA. A standard by which all other peaches are measured. Easy to grow, requires little to no thinning. Universal adaptability to all peach growing areas. Large, yellow fleshed and freestone.

J. H. HALE. About one-fourth to one-third larger than the Elberta and is more highly colored. The skin is deep crimson, almost fuzzless. Flesh, golden yellow. Firm and has a most delicious flavor. The pit separates easily from the flesh. It is exceptionally valuable as a commercial peach.

SHIPPER'S LATE RED. A very large, very highly colored attractive red, yellow fleshed freestone and good quality peach of distinct Hale type. Ripens just after Elberta and J. H. Hale. Good shipping peach, extremely productive.

RED GLOBE PEACH

AFTERGLOW. Usually ripens 3 to 5 days after Elberta, therefore, often meets good, strong markets. Fruits are large, round, oval in shape and almost completely overspread with red. The flesh is yellow stained with red about the pit and is free. The trees are vigorous and rapid growers.

RIO-OSO GEM. Originated in California. A Hale type late peach following Elberta 7 to 10 days. Fruit large in size with brilliant red color and light pubescence. The flesh is firm and fine textured with excellent flavor. Because of its firmness of flesh it is fine for freezing, canning and other uses. Rio-oso Gem is also an outstanding commercial variety.

ONE OF THE SOUTH'S LEADING FRUIT TREE NURSERIES
SELLING DIRECT TO THE FRUIT GROWER

APPLES

Our selection of tried and proven varieties of apples propagated from tested orchards. Assuring you the newest and better strains without paying premium prices.

Early and Summer Varieties

YELLOW TRANSPARENT. Holds a long record as our most widely planted early commercial apple. Tree grows upright, hardy, early bearer, good size, skin clear white to pale yellow in color. Flavor very good. It is an excellent cooking apple known to the housewife everywhere. Ripens early July.

LODI. The Lodi, after being tested over quite a large territory, is proving to be one of our most worthy early apples. It has same quality and flavor as Yellow Transparent, but is much larger and more firm. The tree is more spreading and vigorous, bears early and more regular than Transparent.

EARLY HARVEST. Medium to large, pale yellow, beautiful, fine flavor. Tree moderate, erect grower, good bearer.

WILSON'S RED JUNE. Among the earliest to ripen and the largest of all early apples, a better name for it is "Big Red Apple." Flesh is white juicy and slightly tart, tender and crisp. A very good one, like Transparent bears heavily on young trees.

ANOKA. A hybrid and noteworthy for its beautiful red striped fruit and early bearing, often producing apples the second year after planting.

Winter Varieties

RED McINTOSH. Earlier coloring, solid red, fancy fruits. A special selected strain of the famous McIntosh apple, coloring a solid red without a trace of stripe. Without question this is the finest type of McIntosh that has come to our attention.

RED JONATHAN. A special bud selected strain of the famous Jonathan apple. We have a fine lot at this time to sell, and if you are not getting enough color in your Jonathan, plant this improved strain and you will be well satisfied with the results.

YELLOW DELICIOUS APPLE

YELLOW DELICIOUS. This apple has received national publicity during the last few years and is famous for its unique quality, embracing a combination of flavors which is hard to equal. This, combined with the fine, firm textured flesh of the apple and the beautiful, golden yellow skin at once attracts the eye of the consuming public. It is thrifty and extremely productive, coming into fruiting and giving an abundant crop while very young.

RICH RED DELICIOUS. Improved strain of Delicious apple, picks earlier than regular Delicious, superior carrying qualities.

EARLY RED STAYMAN. One of the newest introductions that has found favor with apple growers everywhere. A brilliant red that does not turn dark.

RED ROME BEAUTY. A red bud sport of the Rome Beauty we are proud to present. Large size, unvarying uniformity, seldom every running less than 3 inches minimum.

DOUBLE RED DELICIOUS

PLUM, PRUNE, APRICOT AND NECTARINE TREES

For a taste treat, eat these delectable fruits
fresh from your own orchard.

PLUMS

METHLEY. A recent introduction which is rapidly gaining popularity due to its fine quality and handsome appearance. The fruit is medium to large in size, reddish purple in color with red flesh. It is juicy, sweet and of distinctive flavor. The tree is vigorous and upright in growth habit. Does well on most types of soil and is a heavy annual bearer.

BRUCE. Considered one of the best of the Oriental type plums. It ripens early (just after Mayflower peach) averages good size, very firm and fine quality for an early plum. If picked just as yellow background appears it will ship well and color a beautiful bright red with slight bloom over it in 3 or 4 days. Very productive but requires interplanting for pollination, using some other Oriental type plum.

BURBANK. Medium to large, orange-yellow, dotted and marbled with red flesh meaty yellow, sweet and good. Valuable for canning and a good market plum. Hardy and very prolific.

RED JUNE. Mottled garnet red color overlaid with delicate bloom, firm light yellow flesh, aromatic and sweet. The trees are large, vigorous, hardy and productive. Blooms late and fruit is very resistant to brown rot and curculio. Usually ripens a week before Abundance.

WICKSON. Largest of all Oriental Plums. Trees upright in growth, bearing good crops under proper conditions. Fruit large, dark red over a yellow ground, splashed and mottled with darker red. Flesh amber yellow, juicy, firm and sweet in flavor.

SANTA ROSA. One of the new and noteworthy Oriental plums. Surpasses Abundance and Burbank in many tree and fruit characteristics. Fruits are large and attractive.

PEARS

Easy to Grow — Early to Bear — Requires Limited Space

BARTLETT. Large size, golden yellow when ripe with a beautiful blush next to the sun. Buttery, very juicy, highly flavored, tree a strong grower, bears early and abundantly. August and September.

KEIFFER. Grown in all sections of the U. S. and Canada. The tree is practically immune to blight, very thrifty and bears constant, heavy crops. The fruit is large to very large, golden yellow often blushed, juicy, and one of the best Pears we have for shipping to distant markets.

ORIENT. (Blight Resistant). The trees are large, vigorous, which grow with open centers and require little pruning to produce good yields. Blooms several days later than Keiffer. Fruit ripens in mid-August and averages large. Flesh is creamy white with good texture, mild in flavor. Recommended for trial planting in all areas where fire blight is prevalent.

IMPROVED SECKEL. This beautiful and delicious pear is rated very high. Size larger than Seckel. It is shaped like Bartlett, but is not as large. October.
Prices on Pear 2 yr. branched:

	Ea.	Per 10	Per 25
3-4'	\$2.00	\$17.50	\$37.50

ORIENT PEAR

PLANT PACK'S TREES FOR PROFIT

PRUNES

STANLEY. The fruit is of the prune type. Excellent for cooking or eating out of hand. The tree is healthy, vigorous and fruit large in size. Dark blue with heavy bloom, flesh greenish yellow, juicy, fine grained, tender and firm. Freestone. Mid-season.

FELLENBURG. It succeeds under most all climatic and soil conditions. The fruit is dark purple with a dark blue bloom, medium to large size oval. The flesh is juicy and delicious and it is very fine for drying and canning.

BLUE DAMSON. The fruit is about the same size as Shropshire but ripens ten days earlier, is high in quality and of better appearance than the old type Damsons. We recommend Blue Damson for both home and commercial plantings.

SHROPSHIRE DAMSON. Fruit oval, tree a good grower and enormously productive, fruit of medium size, produced in thick clusters or groups, dark purple color, esteemed for preserving.

APRICOTS

MOORPARK. One of the largest, orange yellow with numerous specks and dots; flesh yellow, sweet juicy and rich. August.

EARLY GOLDEN. A good variety, very large, deep golden yellow and fine in quality.

SUPERB. Rated by many as the best. The tree is large, very thrifty and hardy and is extremely productive. Very good quality. Fruit is beautiful yellow with slight blush; flesh firm and solid.

STELLA. A hardy Russian type apricot that is very cold resistant. Produces good crops of fruit where other varieties freeze out. The fruit is medium size, golden yellow color and delicious in quality. A freestone. Recommended for all sections where peaches can be grown.

METHLEY PLUM

MONTMORENCY CHERRY

NECTARINES

GARDEN STATE NECTARINE

CAVALIER. A recent introduction by the Virginia Experiment Station which, from observation and reports, gives promise of being one of the best of our nectarines. It is highly colored and attractive, freestone, firm flesh, good eating qualities. It has orange yellow fruit, outside surface splashed to dark red. Resistant to Brown Rot, use same type spray as used on peach orchards. Trees are vigorous and productive, produces up to five bushels of fruit per tree.

SPECIAL ATTENTION

P A C K - T R U E - T O - N A M E N U R S E R Y

EARLY GOLDEN APRICOT

SWEET CHERRY TREES

BLACK TARTARIAN. Very large, bright purplish black, tender and juicy. Tree a remarkably vigorous and erect grower and is an immense bearer. One of the most popular varieties in all parts of the country. Early.

GOV. WOOD. Large, heart shaped, light yellow, mottled light red; juicy sweet and rich. Tree vigorous, productive. An old variety still a favorite in many regions.

NAPOLEON. A beautiful cherry of large size, pale yellow with bright red cheeks; flesh firm, juicy and sweet. One of the best for market. Mid-season.

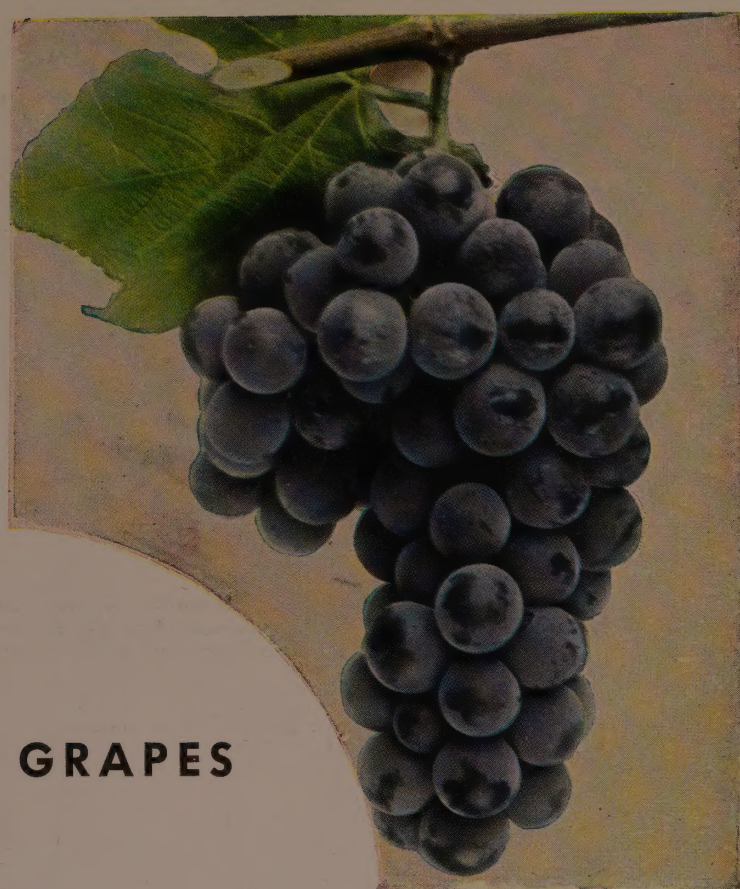

SOUR CHERRY TREES

A sound investment for profit wherever you are located. They are in strong demand and bring good prices. Plan and plant Pack's true-to-name trees.

MONTMORENCY. The universal canning and pie Cherry. Considered the finest sour Cherry in cultivation. Young trees produce tremendous crops of large, firm fruit.

Prices on Cherries:

	Sweet whips		Sour branched	
	Ea.		Per 10	Per 25

CONCORD GRAPE

GRAPES

Grapes — the national health fruit, easy to grow, early to bear. Plant grapes this year for future production and health.

CONCORD. The standard commercial grape. The old reliable Concord — the standard by which all the other black grapes are judged. Our Concord vines are well rooted and are guaranteed to give perfect satisfaction, producing huge quantities of deepest purple grapes of very finest flavor.

FREDONIA. Gives promise of being the earliest good black grape. The vine is vigorous, hardy and productive and ripens its fruits two weeks earlier than Worden. The fruit are large and round; the flesh is juicy.

NIAGARA. Occupies same position among the white varieties as Concord among the black. Bunch and fruit are large, greenish-white changing to pale yellow when fully ripe. Skin thin but tough; quality much like Concord.

DELAWARE. One of the highest quality grapes in cultivation. Extremely hardy. Adapts itself readily to various conditions. Matures its crop early. Keeps and ships well and is immune to black rot. Clusters are well shouldered, compact, light red.

Prices on Grape:

	Ea.	Per 10	Per 100
2 yr. No. 1	\$.75	\$5.50	\$35.00

SCUPPERNONG

HUNT. Vines vigorous, medium heavy foliage. Fruit large, black, skin medium to thin. Pulp medium, excellent flavor. We class this the best of all black varieties.

MALE POLLINATOR. Must be planted with all Scuppernong varieties not blossom fertile. The male vine does not bear fruit and is used for pollinating purposes only. One vine will pollinate up to ten vines.

Prices on Scuppernong:

	Ea.	Per 10	Per 100
2 yr. No. 1	\$1.50	\$12.00	\$95.00

TERMS AND CONDITIONS OF SALE

Please Read Carefully Before Ordering

Our ultimate goal is to offer you the very best, both in price and in quality trees. That deserves your consideration. Having years of experience, together with mass production makes it possible to offer you quality stock at these new low prices.

Twenty percent of the total amount of your order is requested at the time you send us the order. Use our regular order blank if available; if not use plain paper.

Prices quoted F.O.B. McMinnville.

We are prepared to mail you an acknowledgment the same day your order is received. Prices in this catalogue may be changed without notice.

TERMS

Remit by money order or check; unregistered currency is sent at your risk.

Send remittance for full amount of order. It saves us a great deal of office labor and saves you collection fees on balances sent C.O.D.

A deposit of 20% is required with all C.O.D. orders.

SALES TAX

TENNESSEE customers please add 3% to your order to cover the state Sales Tax.

TRANSPORTATION

All orders will be shipped by Express or Parcel Post. Freight is not generally recommended.

Large orders will be sent by express collect. Small packages by Parcel Post.

We have some stock not quoted in this price list. Please advise us of your requirements if you do not find same listed.

HOPA FLOWERING CRAB

PECANS

Eastern varieties of paper shell pecans. Combine profit and pleasure by planting for the future.

STUART. The Stuart comes nearer being suited to all sections of the country and all soils than any other variety. A large nut, fills well, medium to heavy bearer. A hardy, fast growing tree. One of the earliest ripening of all large standard pecans.

MAYHAN. The biggest pecan grown. A vigorous growing tree with splendid long slender nuts. It is a first class pecan with a richly flavored kernel. The nut is about 2¾ inches long — average about 31 nuts to the pound. Luxuriantly foliaged shade tree anywhere.

	Each	Per 10	Per 100
2-3 ft.	\$3.00	\$27.50	\$250.00
3-4 ft.	3.50	32.50	300.00
4-5 ft.	5.00	47.50	450.00

CHESTNUT

CHINESE CHESTNUT. These new blight-resistant trees will bear nuts two years after planting. They are fast growing trees, ideal to take the place of the old fashioned American Chestnut that we all remember from our childhood days, now extinct from blight. The fruit is fully as delicious as the native Chestnut and slightly smaller size. Tree grows to 35 feet tall. Best crops are insured by planting two or more trees for pollination.
